PROFILE SUMMARY

- Backend Developer with hands-on experience building scalable REST APIs and secure web applications using Node.js, Express.js, and MongoDB.
- Experienced in authentication, authorization, database design, real-time communication using Socket.IO, and developing production-ready backend systems.
- Passionate about solving real-world problems, writing clean and maintainable code, and building scalable backend applications.

EDUCATION

Graphic Era Hill University 2024 – Present
Bachelor of Computer Applications **CGPA: 8.39**

EXPERIENCE

Full Stack Developer Intern — Nayoda June 23, 2026 – July 24, 2026

- Worked primarily on backend development, contributing to database-driven application features using MongoDB.
- Implemented Google OAuth authentication to enable secure and seamless user login.
- Developed and integrated database access functionality for retrieving and managing application data.
- Implemented real-time communication features using Socket.IO for interactive user experiences.

PROJECTS

Interview AI — MERN Stack, Groq API, Gemini API 2026 GitHub Link

- Built a full-stack AI platform that analyzes a user's resume against a target job description and returns a match score with personalized interview questions.
- Integrated the Groq API to evaluate resume-to-job-description fit and dynamically generate role-specific interview questions.
- Integrated the Gemini API to retain user profile context and generate a tailored, rewritten resume optimized for the target job description.
- Designed backend pipelines to pass resume and job description data between AI services, and built a responsive React frontend for the end-to-end flow.

SkillSphere — Node.js, Express.js, MongoDB, Socket.IO, JWT 2026 GitHub Link

- Developed a full-stack freelancing platform with secure role-based authentication for clients, freelancers, and administrators.
- Designed and implemented RESTful APIs for gig management, proposal submission, search, notifications, and reviews using Express.js and MongoDB.
- Built real-time messaging using Socket.IO with automatic conversation creation after proposal acceptance.
- Integrated Cloudinary for file uploads and implemented JWT authentication with role-based authorization for secure API access.

Expense Management System — Node.js, Express.js, MongoDB 2026 GitHub Link

- Built a secure expense management system that allows users to track and manage their daily expenses efficiently.
- Designed RESTful APIs for expense CRUD operations with MongoDB and implemented JWT-based user authentication.
- Added expense categorization and filtering, enabling users to view and analyze their personal spending history.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript
Backend: Node.js, Express.js, REST APIs, Socket.IO
Database: MongoDB, Mongoose
Developer Tools: Git, GitHub, Postman, VS Code, MongoDB Atlas, Redis
DevOps & Deployment: Docker
Operating System: Linux
